

What's in the new version (V1.17)?

New or updated features in version 1.0.0.17 are:

1. An instructional video (mainly for judges who may be unaware of the features of the machine). This may be run from the Scoring Machine menu itself or stand-alone in Windows Media Player.
2. Improved judge prompting with letters and signs (* for keypad captured and = for mark captured)
3. Deliberate delay after the score is captured to allow time for the judges to ask for a re-mark before the score is announced and the next image displayed. Prompted to the controller by a red colour to Next Image button.
4. New, large score display panel. Overlays the judging interface screen, gives confirmation of image number just marked and acts as a prompt to the 'controller' to ask for the next image to be displayed.
5. Automatic backup of the marks at the point every image is scored. The backup file may be reloaded as a part-run competition in the event of power failure or other in-competition disaster.
6. New results screen showing top image placing down to 12th position. An exported spreadsheet shows placing for all images.
